PROFESSIONAL EXPERIENCE (ABOUT 3 YEARS)

- Building real products:** almost 3 years shipping **Next.js** and **React** apps for an **AI real-estate platform**, healthcare clients and a CSR platform, taking features from **Figma design to production**.
- SEO engineering:** built a **programmatic SEO system** that generates **thousands of location and category pages** from data, **server-rendered** so crawlers get the full content. Each page has **unique titles and descriptions, canonical URLs and Open Graph tags**, plus **JSON-LD structured data** (FAQ, breadcrumb, item list). Managed **crawl budget** by serving thin pages as **noindex, follow** and keeping them out of the sitemap until they have enough content, and used **canonical tags** to consolidate duplicate filter URLs. Improved discovery with **sitemap indexes and accurate lastmod dates**, **internal linking** between related pages, and **CDN caching with stale-while-revalidate**.
- API design with backend teams:** wrote the **API specification** that backend engineers built to: the **correct HTTP response for every page state** (200 OK, 404 not found, 410 gone, 503 unavailable) and **data feeds of live and removed content** so search engines index pages correctly.
- Backend and APIs (FHIR):** built the **complete backend for a healthcare appointment app** in **Node and Express**: REST endpoints to list doctors, book, view and cancel appointments on a FHIR server, **deployed on Render**. Implemented the **SMART on FHIR** authorization flow (**OAuth2 login**) for secure access to patient and practitioner data, with the Next.js frontend on Vercel. [Live app](#) · [Code](#)
- Docker and CI/CD:** built a **prebuild stage in the GitLab CI/CD pipeline** that caches **Turborepo** and **pnpm** between runs, and **set up Turborepo remote caching**, to speed up builds of a 7-app monorepo. **Reworked the Dockerfile** so CI reuses the prebuilt output while local Docker builds still compile from scratch.
- Testing:** wrote **Cypress end-to-end scripts covering every feature of a full sprint** at Metta Social, testing the complete user flow. Wrote **unit tests** at Altrr for logic that is easy to break, such as search-indexing rules and speech input parsing.
- CMS backends:** built the **website backend in Strapi CMS** at Metta Social, connected it to the frontend, and worked on the **React Native Android app** alongside the web platform.
- AI features:** built a **streaming AI chat** (conversation threads, error and session-expiry handling), a **voice-to-form flow** that turns speech into a pre-filled form, and **AI video generation** with shared hooks for long-running jobs.
- RAG for property Q&A:** ground the AI chat's answers in property data, FAQs and blog content: split content into chunks, create embeddings, store them in a vector database and retrieve the best matches for each question.
- Answer sources in chat:** stream the retrieved sources with each answer and display them in the chat UI using citation components, and measure answer quality against a set of real user questions.
- AI-assisted development:** **Claude Code** and **Cursor** used daily for writing, debugging and testing code, with every change reviewed before it ships.
- Design system and payments:** own and maintain the **component library shared by 7 apps** (Radix and Tailwind, with rules that keep apps from depending on each other's code), and added **Razorpay payments** with server-side signature verification.
- MERN and LLM APIs:** built a **MERN marketplace for used cars** ([BuyC Corp](#)) and a story generator on the **OpenAI API** ([Story Generator](#)).

SKILLS

Frontend: React 19, Next.js 15 (App Router, SSR/ISR), TypeScript, Tailwind CSS, Radix UI, shadcn/ui, Framer Motion

State & data: TanStack Query, Zustand, Redux Toolkit, GraphQL

Backend & APIs: Node.js, Express, REST API design, Strapi CMS, SMART on FHIR / OAuth2, NextAuth, Razorpay

DevOps: Docker, GitLab CI/CD, Turborepo, pnpm, Git, Vercel, Render

Testing: Cypress, Vitest / Jest, unit and end-to-end testing

AI & SEO: Streaming LLM interfaces, OpenAI API, Claude Code, Cursor; programmatic SEO, JSON-LD, sitemaps, canonical tags; RAG, embeddings, vector databases

WORK HISTORY

Altrr Software Services, Software Engineer

Sep 2025 – Present

trythat.ai is an AI property advisory platform for people buying, renting or listing property in India, with an AI chat advisor, property search, market briefs, FAQs and AI-generated marketing videos. Built as a 7-app Next.js monorepo.

Mindbrowser, Software Engineer

Dec 2024 – Aug 2025

A digital product studio building software for healthcare and enterprise clients. The healthcare work involved Medplum, an open-source platform built on the FHIR standard for health data.

Metta Social, Junior Development Analyst

Jan 2024 – Nov 2024

A CSR platform for corporate clients, made up of a Next.js website with a Strapi backend and a React Native Android app.

EDUCATION

Masai School, Bengaluru, Full Stack Web Development (full-time)

2022 – 2023

Fergusson College, Pune, BSc, Computer Science

2021
