Summary

Frontend engineer with nearly 3 years of experience building production React and Next.js applications for AI-powered real estate and healthcare platforms. Experience spans component architecture and shared design systems, real-time interfaces, payment integration, and SEO. Comfortable owning features end-to-end and working from Figma alongside design, backend, and QA.

Skills

- **React & Frontend:** React 19, [Next.js](#) 15 (App Router, SSR/ISR), TypeScript, JavaScript ES6+, HTML5, CSS3, DOM APIs, responsive design
- **AI Product Engineering:** Streaming LLM response rendering, conversation threading, voice-to-form flows, AI-assisted development (Claude Code, Cursor)
- **State & Data:** Zustand, TanStack Query, Redux Toolkit, React Context, GraphQL
- **UI & Design Systems:** Tailwind CSS v4, shadcn/ui, Radix UI, MUI, Framer Motion, Figma, component library architecture, enforced export APIs
- **SEO & Performance:** Programmatic SEO, JSON-LD structured data, canonical strategy, dynamic sitemaps, indexation control, OpenGraph, CDN caching
- **Build & Tooling:** Turborepo, pnpm workspaces, Vite, Webpack, Turbopack, Docker, Git, GitLab.
- **Backend & Integrations:** [Node.js](#), Express, REST APIs, NextAuth, Razorpay

- **Testing:** Cypress, E2E automation, unit testing (Vitest/Jest)
 - **Ways of Working:** Agile/Scrum, code reviews, merge request workflow, cross-functional collaboration
-

Work Experience

Altrr Software Services | Software Engineer

Pune, India | Sep 2025 - Present | [trythat.ai](#)

AI property advisory platform for Indian real estate.

- **Design system ownership:** Own and maintain the shared component library used across all seven apps in the monorepo, built on Radix primitives and Tailwind with an enforced export API that keeps zones decoupled.
 - **Programmatic SEO:** Built landing pages generated automatically from city, locality, and property-type combinations, rendered server-side with canonical URLs, JSON-LD, OpenGraph tags, and auto-generated sitemaps.
 - **Indexing rules:** Wrote content-quality checks, backed by unit tests, that keep thin pages out of the sitemap and mark them "noindex, follow."
 - **AI chat:** Built the streaming chat UI, including threaded conversations and handling for errors and expired sessions.
 - **Voice-driven data entry:** Delivered a voice-to-form flow — users describe a property aloud and get a pre-filled, editable listing form.
 - **AI video generation:** Built the AI video feature end-to-end — upload, preview, and library screens for turning photos into short marketing videos.
 - **Background jobs:** Built shared hooks for long-running jobs like video generation, with progress stored outside the triggering component so it survives navigation.
 - **Home screen redesign:** Led redesign of the authenticated home, including AI search entry, personalized activity/insight cards, and subscription management.
 - **Payments:** Integrated Razorpay for paid document downloads, including order creation and server-side payment signature verification.
-

Mindbrowser | Software Engineer

Pune, India | Dec 2024 - Aug 2025

Digital product studio; healthcare and enterprise client projects.

- Built and maintained React/[Next.js](#) UI features across multiple concurrent client engagements, working from Figma designs alongside backend and QA.
 - Shipped features under strict delivery and compliance deadlines across concurrent projects, collaborating with cross-functional teams.
 - Worked within healthcare product constraints, gaining exposure to Medplum and FHIR-based data models.
-

Metta Social | Junior Development Analyst

Pune, India | Jan 2024 - Nov 2024

CSR platform for corporate clients.

- Developed reusable React components and integrated Strapi CMS.
 - Built responsive layouts and accessible UI patterns, improving mobile engagement.
 - Contributed to React Native Android app alongside Next.js web platform.
 - Implemented Cypress E2E test coverage.
-

Projects

Healthcare Appointment Scheduling — SMART on FHIR (independent build)

- Built a full-stack appointment scheduling app with SMART on FHIR integration and OAuth2 authentication for secure patient/practitioner data access.
 - Developed [Node.js/Express](#) REST endpoints for the appointment lifecycle and a React/[Next.js](#) scheduling UI for booking and cancelling appointments.
-

Education

- **Full Stack Web Development (Full-Time)** | Masai School, Bengaluru | 2022 - 2023
- **BSc Computer Science** | Fergusson College, Pune | 2021
